PROFESSIONAL SUMMARY

Results-driven MERN Stack Developer with hands-on experience building production-grade web applications, REST APIs, and intelligent automation systems. Proficient in React.js, Node.js, Express.js, MongoDB, and JavaScript, with a strong track record of delivering AI-integrated, automation-first solutions that eliminate manual bottlenecks and improve operational efficiency. Designed and deployed five project-driven applications spanning real-time tracking, AI-powered resume analysis, ticketing systems, and full ERP automation via Playwright and Google Sheets API. Seeking to leverage full-stack development expertise and automation engineering skills at a product-based company, SaaS startup, or MNC.

TECHNICAL SKILLS

Frontend: React.js · JavaScript (ES6+) · HTML5 · CSS3 · Tailwind

Database: MongoDB · Mongoose

Automation: Playwright, Google sheet Api, Ai integration

Backend: Node.js · Express.js · REST APIs · JWT Authentication

Real-Time: WebSocket · Socket.io

Tools: Git · GitHub · Figma · React Native

WORK EXPERIENCE

Software Developer, IT Coordinator & ERP

2025 – Present

Dee Vee Projects Ltd · Raipur, Chhattisgarh

- Engineered a Playwright + Google Sheets API automation pipeline that autonomously reads spreadsheet data and executes end-to-end ERP data entry in Nway ERP — eliminating 100% of manual data-entry workload for procurement workflows.
- Integrated an AI-powered HSN code generation module into the ERP automation system, automatically resolving missing tax codes without human intervention and reducing lookup errors to zero.
- Developed and maintained JavaScript-based automation scripts for vendor onboarding, purchase order creation, and item master setup - accelerating cross-department processing speed.
- Architected and deployed full-stack automation tools with error handling, retry logic, and structured logging for reliable production-grade performance.
- Administered and optimized Nway ERP platform configurations, improving system reliability and reducing IT support incidents through proactive troubleshooting.
- Collaborated with procurement, finance, and operations teams to identify automation opportunities and deliver technical solutions that improved data accuracy and team productivity.

KEY PROJECTS

AI Resume Analyzer

- Built a full-stack AI-powered platform that accepts resume uploads, parses content, and returns structured scoring, section-by-section analysis, and actionable improvement recommendations.
- Engineered end-to-end pipeline: file upload → document parsing → AI inference → structured insight rendering — with JWT-based authentication for secure user sessions.
- Designed responsive React.js frontend with real-time feedback UI and RESTful Node.js/Express.js backend with MongoDB for result persistence.

Ticketing Support System

- Architected a full-stack ticket management system with role-based access control, ticket submission, admin dashboard, priority queuing, and resolution workflow tracking.
- Implemented JWT authentication with separate user/admin roles; built RESTful APIs for ticket CRUD operations, status management, and audit trail logging.
- Delivered real-time status updates and a clean React.js UI enabling support teams to manage workloads with measurable efficiency gains.

Real-Time Location Tracker

- Built a live multi-client location tracking application using WebSocket for persistent, low-latency bi-directional communication between server and connected clients.
- Implemented simultaneous multi-session tracking with real-time map updates across all active clients, enabling location-aware use cases with sub-second refresh rates.
- Designed scalable event-driven Node.js backend to handle concurrent WebSocket connections with graceful disconnection handling.

Nway ERP Automation Software

- Engineered full ERP automation solution: reads structured data from Google Sheets and autonomously creates vendors, items, and purchase orders in Nway ERP via Playwright browser automation.
- Integrated AI module for automatic HSN code generation — auto-fills missing tax codes during data processing, resolving lookup bottlenecks without any human intervention.
- Reduced ERP manual data-entry workload significantly, freeing team capacity for higher-value strategic tasks; production-deployed with robust error handling and retry logic.

Portfolio Website

- Developed a performance-optimized, fully responsive personal portfolio with smooth Framer Motion animations and mobile-first design.
- Deployed on Vercel with CI/CD pipeline integration; achieved fast load times and Lighthouse performance optimization.

EDUCATION

MCA – Master of Computer Applications

BCA–Bachelors of Computer Applications

CORE STRENGTHS

- Full Stack Development (MERN)
- Automation Engineering & AI Integration
- Problem Solving & Analytical Thinking
- Fast Learner — Self-Directed Growth
- Team Collaboration & Communication
